-! FUNCTION: May be involved in the regulation of specific developmental processes in the CNS.

-! FUNCTION: Phosphacan, previously designated 3F8 chondroitin sulfate proteoglycan or 3H1 keratan sulfate proteoglycan depending on the glycosylation status; as a soluble nervous tissue-specific proteoglycan. It is synthesized by glia and binds to neurons and to the neural cell adhesion molecules tenascin, N-CAM or NG-CAM but not to laminin and fibronectin. Phosphacan acts as a potent inhibitor of cell adhesion and neurite outgrowth.

-! CATALITIC ACTIVILY: Protein tyrosine phosphate + H(2)O = protein

-!- CATALYTIC ACTIVITY: Protein tyrosine phosphate + H(2)0 = protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       'Expression of cytoskeletal-associated protein tyrosine phosphatase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           tyrosine + phosphate.
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- SIMIGARITY: Belongs to the protein-tyrosine phosphatase family.
Non-receptor class subfamily.
-!- SIMIGARITY: Contains 1 PERM domain.
-!- SIMIGARITY: Contains 1 PDZ/DHR domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SEQUENCE FROM N.A.

Comment: Specifical: Expressed in early stages of pancreatic development. First expressed in early stages of pancreatic development. First expressed in day 8.5 cmbryos (BB.5) in the dorsal part of the midgut endoderm and by E9.5, in the pancratic conscal part of the midgut endoderm and by E9.5, in the pancratic rudiment specifically in early endocribe progenitor cells. At later stages expressed in insulin- or glucagon-producing cells. During neural development, the type 2 FTP-NP is expressed in early stages of neurogenesis, and the type 1 weakly in the later stages.

Fitzgerald L.R., Walton K.M., Dixon J.E., Largent B.L.;
Submitted (NOV-1996) to the EMBL/GenBank/DDBJ databases.
-! FUNCTION: Implicated in development of nervous system and pancreatic endocrine cells.
-! CATALYTIC ACTIVITY: Protein tyrosine phosphate + H(2)0 = protein tyrosine phosphate + H(2)0 = protein tyrosine protein (Probable).
-! TISSUE SPECIFICITY: Pancreas.
-! PTM: Appears to undergo multiple proteolytic cleavage at consecutive basic residues (By similarity).
-! SIMILARITY: Contains 1 protein-tyrosine phosphatase domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 01-NOV-1997 (Rel. 35, Created)

Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).

-!- FUNCTION: Implicated in development of nervous system and pancreatic endocrine cells.

-!- CATALYTIC ACTIVITY: Protein tyrosine phosphate + H(2)O = protein tyrosine + phosphate.

-!- SUBCELLULAR LOCATION: Type I membrane protein (Probable).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Note=No experimental confirmation available;
TISSUE SPECIFICITY: Highest levels in brain and pancreas. Lower levels in trachea, prostate, stomach and spinal chord.
DOMAIN: The cytoplasmic domain appears to contain the autoantigenic epitopes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          -!- DISEASE: Autoantigen in insulin-dependent diabetes mellitus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       -!- MISCELLANBOUS: Optimum activity is measured at pH 4.5.
-!- SIMILARITY: Contains 1 protein-tyrosine phosphatase domain.

-! TISSUE SPECIFICITY: Selectively expressed in a subset of axons and pioneer neurons in the embry.
-! SIMILARITY: Contains 12 fibronectin type III domains.
-! SIMILARITY: Contains 1 protein-tyrosine phosphatase domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TISSUE=Embryo;

(ISOFORM 1).

LIU T., Zhang J., Fu G., Zhang Q., Ye M., Zhou J., Wu J., Shen Y.,
Yu M., Chen S., Mao M., Chen Z.;

**Human protein tyrosine phosphatase (70zpep) homolog.";

**Submitted (JUL-1998) to the EMBL/GenBank/DbBJ databases.

-!- FUNCTION: Seems to act on CDL. May play a role in regulating the
function of CDl and its associated protein kinases.

-!- CATALYTIC ACTIVITY: Protein tyrosine phosphate + H(2)0 = protein
                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           PTRM HUMAN STANDARD; PRT; 807 AA.

Protein-tyrosine phosphatase, non-receptor type 22 (EC 3.1.3.48)
(Hematopoietic cell protein-tyrosine phosphatase 702-PEP) (Lymphoid
-!- TISSUB SPECIFICITY: Spleen, thymus, lympH node and bone marrow. -!- SIMILARITY: Belongs to the protein-tyrosine phosphatase family. Non-receptor class subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Eukaryoča, Metazoa, Chordata, Craniata, Vertebrata, Buteleostomi,

-!- TISSUE SPECTFICITY: Predominantly expressed in lymphoid tissues and cells. Isoform 1 is expressed in thymocytes and both mature and T cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (R-PTP-N) (Islet cell

    -i- SIMILARITY: Belongs to the protein-tyrosine phosphatase family.
    Non-receptor class subfamily.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Bos taurus (Bovine).

BMBO J 20:4013-4023(2001).

Involved in processes specific for neurosecretory processes. May be involved in processes specific for neurosecretory granules, such as their biogenesis, trafficking or requlated exocytosis or may have a general role in neuroendocrine functions. Seems to lack intrinsic enzyme activity. May play a role in the regulation of secretory granules via its interaction with SNTB2.

-! SUBGNIT: Interacts with phosphorylated SNTB2, protecting it from protein cleavage by CAPNI. Dephosphorylation of SNTB2 upon insulin stimulation disrupts the interaction and results in its cleavage.
-! SUBCELULAR LOCATION: Type I membrane protein. Neuroendocrine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             REVISIONS TO REF.2, AND AUTOIMMUNITY IN TYPE I DIABETES.

phosphatase-related sequence IA-2, is regulated during cell growth
and stimulated by mitogens in 373 fibroblasts.",
Blochmen. Blophys. Res. Commun. 277:154-161(1995).
-1- FUNCTION: Implicated in neuroendocrine secretory processes. May be
involved in processes specific for neurosecretory granules, such
as their blogenesis, trafficking or regulated exceptosis or may
have a general role in neuroendocrine functions. Seems to lack
intrinsic enzyme activity. May play a role in the regulation of
secretory granules via its interaction with SNTB2 (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                               0; Gaps

-!- SUBUNIT: Interacts with phosphorylated SNTB2, protecting it from procein cleavage by CARN1. Dephosphorylation of SNTB2 upon insulin stimulation disrupts the interaction and results in its cleavage (By similarity).
                                                                                                                                                                                            SUBCELLULAR LOCATION: Type I membrane protein.
TISSUE SPECIFICITY: Abundantly expressed in the brain and
fibroblasts. Weakly expressed in the colon, intestine, stomach and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             PTPN RAT

1. Submitted (FBB-1995) to the EMBL/GenBank/DDBJ databases.

1. FUNCTION: Implicated in neuroendocrine functions. Seems to lack intrinsic enzyme activity. May function as a negative regulator of PTPases in neuronal tissues. May play a role in the regulator of PTPases in neuronal tissues. May play a role in the regulation of PTPases in neuronal tissues. May play a role in the regulation of PTPases in neuronal tissues. May play a role in the regulation of PTPases in neuronal by CAPNII. Dephosphorylation of SWTB2 (By similarity).

2. SUBUNIT: Interacts with phosphorylation of SWTB2 upon insulin stimulation disrupts the interaction and results in its cleavage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This SWISS-PROT entry is copyright.     (By similarity).
    SUBCELLULAR LOCATION: Type I membrane protein.
    TISSUB SPECIFICITY: Expressed only in brain, specifically in cerebral cortex, diencephalon and brain stem.
    INDUCTION: By mitogens such as basic fibroblast growth factor (BPGF) and platelet derived growth factor (PPGF) (By similarity).
    PTM: Appears to undergo multiple proteolytic cleavage at consecutive basic residues (By similarity).
    SIMILARITY: Contains 1 protein-tyrosine phosphatase domain.

                                                                 Bukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi;

C. -- FUNCTION: Endonuclease IV plays a role in DNA repair. It cleaves

CC phosphodiester bonds at apurinic or apyrimidinic sites (AP sites)

CC phosphodiester bonds at apurinic or apyrimidinic sites (AP sites)

CC residues. It preferentially attacks modified AP sites created by

CC residues. It preferentially attacks modified AP sites created by

CC -- CATALYTIC ACTIVITY: Endonucleolytic cleavage to 5'-

phosphooligonucleotide end Products.

CC -- COPACTOR: Binds 3 zinc ions (By similarity).

CC -- COPACTOR: Binds 3 zinc ions (By similarity).

CC -- SIMILARITY: Belongs to the AP endonuclease family 2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This SWISS-PROT entry is copyright. X. Complete genome sequence of Caulobacter crescentus.";

R. Complete genome sequence of Caulobacter crescentus.";

R. Proc. Natl. Acad. Sci. U.S.A. 98:4136-4141(2001).

C. C. CATIVITY: APP + L-tryptophan + tRNA(Trp) = AMP +

C. C. Giphosphate + L-tryptophanyl-tBNA(Trp).

C. C. SUBUNIT: Homodimer (By similarity).

C. C. SUBUNIT: Homodimer (By similarity).

C. C. SUBUNITY: Belongs to class-I aminoacyl-tRNA synthetase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     TIGREAMS; TIGR00233; trpS; 1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0; Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                     tyrosine + phosphate.
-!- SUBCEILUTAR LOCATION: Cytoplasmic (By similarity).
-!- SUBCEILUTAR RELONG to the protein-tyrosine phosphatase family.
Non-receptor class subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Homo sapiens (Human).

".".;
"Cloning and expression of an inducible lymphoid-specific, protein
tyrosine phosphatase (HePTPase).";
Eur. J. Immunol. 22:235-239(1992).
-!- FUNCTION: May play a role in the regulation of T and B lymphocyte
development and signal transduction.
-!- CATALYTIC ACTIVITY: Protein tyrosine phosphate + H(2)0 = protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             tyrosine + phosphate.
--- SUBCELLULAR LOCATION: Cytoplasmic.
--- TISSUE SPECIFICITY: Expressed exclusively in thymus and spleen.
---- SIMILARITY: Belongs to the protein-tyrosine phosphatase family.
Non-receptor class subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   MEDLINE=92111631; PubMed=1530918;

"Spatially restricted expression of candidate taste receptors in the Drosophila gustatory system.";
Curr. Biol. 11:822-835(2001).
                                                                                                                                                                                                                                                                                                                                                                                                   -i- CAUTION: Ref.1 sequence differs from that shown due to erroneous gene model prediction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                        Unpublished observations (NOV-2001).

-!- FUNCTION: Probable role in the gustatory response.

-!- SUBCELLULAR LOCATION: Integral membrane protein (Potential).

-!- TISSUB SPECIFICITY: Expressed in the adult abdomen and wing.

-!- SIMILARITY: BELONGS TO FAMILY DR-TR OF G-PROTEIN COUPLED

-RECEPTORS. SUBFAMILY VIII.
"Annotation of the Drosophila melanogaster euchromatic genome:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (POTENTIAL)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

                                                                                                                                                                                                                                                                                                                          Savijoki K., Palva A.,
"Purification and molecular characterization of a tripeptidase from
Lactobacillus helveticus.",
Appl. Buviron. Microbiol. 66:794-800(2000).
-!- FUNCTION: Release the N-terminal amino acid from tripeptides. Has
a preference for tripeptides containing a N-terminal methionine or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Lippptide.
--- COFACTOR: Zinc.
--- SUBUNIT: Homotrimer (Probable).
--- SUBCELLULAR LOCATION: Cytoplasmic.
--- SUBILARITY: Belongs to peptidase family M20A.
--- CAUTION: The potential zinc-binding site Asp residue in position
--- 144 is replaced by a Met.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

G-protein coupled receptor; Transmembrane; Glycoprotein; Lipoprotein;
                             arginine vasopressin type la receptor ";
Biochim. Blophys. Acta 1263:266-270 (1995).
-!- PUNCTION: Receptor for arginine vasopressin. The activity of this receptor is mediated by G proteins which activate a phosphatidylindslto-calclum second messenger system.
-!- SUBGELFULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 6 (POTENTIAL).

C. -! CATALYTIC &CTIVITY: L-2,4-diaminobutanoate + pyruvate = L-aspartate 4-semialdehyde + L-alanine.

C. -: COFACTOR: Pyridoxal phosphate.

-: PATHMAY: Biosynthesis of ectoine (1,4,5,6-tetrahydro-2-methyl-4-pyrididine carboxylic acid); first step.

-: SIMIGARITY: Belongs to class-III of pyridoxal-phosphate-dependent aminotransferases.

ubiquinol by two successive reactions, coupled with the transport of Na(+) ions from the cytoplasm to the periplasm. NgrA to ngrE are probably involved in the second step, the conversion of ubisemiquinone to ubiquinol.

CATALYTIC ACTIVITY: NADH + ubiquinone + Na(+)(In) = NAD(+) +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        01-JAN-1990 (Rel. 13, Created)

                                                                                                                                                                                                     ubiquinol + Na(+) (Out).
-!-SUBUNIT: Composed of six subunits; ngrA, ngrB, ngrC, ngrD, ngrB
and ngrP (By similarity).
-!-SIMILARITY: Belongs to the ngrA family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      F., Lescure
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

"Structural analysis of Arabidopsis thaliana chromosome 5. V. Sequence features of the regions of 1,381,565 bp covered by twenty one physically assigned P1 and TAC clones.";

DNA Res. 5:131-145(1998)

-i. FUNCTION: This protein promotes the GTP-dependent binding of aminoacyl-tRNA to the A-site of ribosomes during protein dillinesis.
-!- SUBCELLUIAR LOCATION: Cytoplasmic.
-!- MISCELLANEOUS: There are four genes for EF-1-alpha in Arabidopsis thaliama. The sequence of genes 1, 2, and 3 are identical.
-!- SIMILARITY: Belongs to the GTP-binding elongation factor family.
EF-Tu/BF-1A subfamily.
